Sustainable, Responsible and Impact Mutual Fund and ETF Chart

Fund Profile:
Aspiration Redwood Fund

General Fund Information

Ticker: REDWX

Assets under management (AUM): $74.04M (in US$ millions)

General Fund Type: Equity Large Cap

Specific Sizes or Types of Investments: Large Cap Equities

Financial Objective: Seeks to maximize total return, consisting of capital appreciation and current income

Specific ESG Focus: The US Sustainable Equity Strategy seeks to provide value-added investment results over the S&P 500 Index by investing in attractively valued companies with strong fundamental valuation, as well as a long-term sustainable business model. The strategy is actively positioned to benefit from themes such as water and energy conservation, demographics and other important trends. In short, we believe that combining a traditional valuation discipline with sustainability analysis enhances the possibilities for value-added returns.

Account Minimums

Minimum Account: $100

Minimum IRA: $100

Methodology
Screening Venue: In-house and outside

Screening Party: UBS Asset Management (Americas) Inc.

Screening Database Used: UBS Asset Management (Americas) Inc. invested considerable resources in the development of a proprietary sustainable database. Today, our sustainability database mirrors the structure of the SASB Materiality Map®, which was created by working groups of investors, accountants, industry experts and data providers. These expert groups identified material Key Performance Indicators (KPIs) that are industry specific, and can be indicators of superior sustainability performance. After a period of public review, the database is updated periodically.

Screening Process: Each KPI is converted into a score using industry-specific weightings, which combined produces a final score for the company. In theory our scores would be 0 to 100, but in practice the maximum score is currently 87. This will change over time as the scores are updated. The scores are broken into deciles for each industry group—i.e., score ranges are different between industry groups. Because each decile typically has the same number of companies, our scoring system helps us filter out companies that aren’t attractive candidates, while focusing our attention on the most attractive stocks from a sustainability perspective. It is important to note that we do not use the sustainability score as a single basis for decision making. The score is simply a first step that enables us to prioritize our entire research universe, and to provide us with deeper insights that we use in our qualitative discussions with our equity analysts. The Sustainable Investors team reviews the sustainability ratings on a weekly basis in conjunction with updated security valuations from the Global Equity Valuation System, and analyst research flags issued on Pedestal. While our sustainability ratings do not typically change on a weekly basis, our security valuation rankings do. In total, our sustainability database includes 68 sustainability factors across 21 industries. By weighting these metrics, normalizing and rolling them up into a company specific score, we are able to rank-order companies within their industries.
